October 25, 2018

Dear Supporter,

For 19 years, The WaterFront Center has been connecting people to the water through education and recreation. We accomplish this through our private charters and public sails aboard the National Historic Landmark, *Christeen*, adult and junior sailing programs, marine science and STEM programs, after-school enrichment programs, as well as sailboat and paddle rentals. For 2018, the revenue from these programs will cover only a portion of the operating expenses for our organization. We rely on your support to keep these vital programs ongoing.

One of the many highlights of this past season was a program WFC developed for Oyster Bay High School students called "The Physics of Sailing". For many, physics can be a complicated subject; what do all those vectors mean, what aerodynamic and hydrodynamic forces are at play, and how these apply to everyday life? Our program offers the students the opportunity to connect what they have been learning all year in their physics class with the experience of sailing Sonars in West Harbor. While sailing, calculations were made including the acceleration and deceleration of the boat, computations of net force, momentum, work, power, and even kinetic energy. Students conducted trials to determine a boat's velocity in varying conditions, measure wind velocity with an anemometer, and identify the difference between true and apparent wind. Students are then able to apply concepts learned in the classroom with real world in a way that would otherwise be nearly impossible.

Please show your support for The WaterFront Center by contributing to our annual appeal and allowing us to continue to provide unique services, opportunities, and experiences – like the one described above – to our surrounding community.

Sincerely and with gratitude,
